Ask A Master Gardener Q & A

Daylilies

- Q. I have a patch of daylilies in my yard. Last year they all bloomed. This year one side of the patch has blooms while the other side has only green leaves. They all receive the same amount of sun. Why are half of the plants not blooming?
- A. The most common reason for daylilies not blooming is that they are overcrowded. You can divide daylilies anytime after their blooming period. Daylilies are very hardy but they will be less stressed if you wait until the weather is cooler in September to divide them. If you divide them in late summer or early fall they should have time to develop a good root system before winter.

For more home, yard, garden and insect related information, visit our website at www.extension.uiuc.edu/cooknorth/mg or call the Cook County/North Suburban Extension Master Gardeners at (847) 818-2901 or (847) 298-3502. Office Hours are reduced during the fall and winter months.
