

Weather YouTube Videos

A series of You Tube Videos on weather related topics are being developed by educators in the unit, with the assistance of the University of Illinois Extension Office of Web Development.

Currently, four videos are available for viewing. The videos describe the wind chill and heat indexes, types of thunderstorms,

and why we have seasons. These videos are meant for both youth and adult audiences

to help them understand basic weather processes. Additional videos are being developed on how lightning forms, good and bad ozone, is heat lightning for real, what makes the wind blow, and cloud formation.

These videos can be accessed at :
