9:00: Opening Session

The Illinois Specialty Crops Industry and Its Partners on the Road to 2020. Diane Handley, Manager, Illinois Specialty Growers Association; and Rick Weinzierl, Conference Educational Program Chair, University of Illinois.

The future for specialty crops growers in Illinois is bright and how we address old and new challenges will determine just how bright. A look at a range of issues – aging farmers, new pests, food safety and produce recalls, severe weather, herbicide drift, and more – illustrates the need for education, planning ahead, and increased cooperation among growers, educators, governmental agencies, supporting industries, and consumers.

<td>In aquaponics, fish and plants grow together in one integrated, soilless system. The fish waste provides a food source for the plants and the plants provide a natural filter for the water the fish live in. Aquaponics produces safe, fresh, organic fish and vegetables. When aquaponics is combined with a controlled environment greenhouse, premium quality crops can be grown on a year-round basis, anywhere in the world. Aquaponics can be used to sustainably raise fresh fish and vegetables for a family, to feed a village or to generate a profit in a commercial farming venture. This session will provide an opportunity to learn about how to grow fish and food together.</td>
